

The PAL® Solution

✓ SHORTER RECOVERY

Less bruising, swelling and trauma.²

✓ PRECISE

Improved surgeon precision for body sculpting and contouring.²

✓ SAFE

Increased patient comfort and improved safety. Unlike ultrasound or laser liposuction, PAL is not heat-based, so there's no risk of patient burns.²

✓ FAST

Faster procedure compared to manual liposuction.²

The work required is significantly reduced with PAL, and the device allows a greater degree of control and precision.³

This is not intended as a substitute for medical advice.

This information is intended to provide you with a better understanding of Power-Assisted Liposuction (PAL). The best way to get complete information and answers to your specific questions is through a personal consultation with a credentialed plastic surgeon.

Power-Assisted Liposuction

See Results. **FASTER.**

What is Liposuction?

Liposuction is a surgical procedure that can help reduce unwanted fat in areas of the body resistant to diet and exercise.

During the procedure, small deposits of fat are removed through a stainless steel tube called a cannula, with the assistance of a suction system.

Common areas of treatment include the stomach, thighs, hips, back and arms.

What is Power-Assisted Liposuction (PAL)?

Traditional methods of liposuction require significant physical effort by your surgeon. This can lead to bruising, swelling, and ultimately a longer recovery.

MicroAire's PAL adds a gentle vibration to the cannula. Although it's barely visible to the human eye, the added vibration makes a remarkable difference to the procedure. Your surgeon is able to use less force when performing liposuction, which means less bruising, less swelling and a faster recovery.

Powered-Assisted Lipoplasty is the most widely used and preferred alternative to manual liposuction.¹

Power-Assisted Liposuction is a more effective and safer way to eliminate unwanted deposits of fat from large or small areas, and allows patients to achieve dramatically improved results with a faster recovery than ordinary liposuction.⁴

Am I a Candidate?

Power-Assisted Liposuction can be performed on overweight patients who want to remove large volumes of fat, or on patients simply looking for definition, contouring and body sculpting.

- ✓ **STUBBORN FAT**
You have stubborn fat deposits that are resistant to diet or exercise.
- ✓ **OUT OF PROPORTION**
You have fat deposits that are out of proportion with the rest of your body.
- ✓ **NEAR YOUR WEIGHT GOAL**
You are 30% within your ideal weight.

Your doctor is best suited to determine if you are a candidate for Power-Assisted Liposuction.
